Respected Sir/Ma'am,

As a final-year computer science student with a passion for developing reliable and scalable software solutions, I am excited to apply for the analyst at Goldman Sach. While I may be at the beginning of my professional journey, my academic projects and extracurricular experiences have instilled in me a deep appreciation for quality code, thoughtful architecture, and forward-thinking design. I am particularly drawn to GS commitment to deliver products that drives the world towards the future and its opportunity to grow in one's career. I am eager to contribute my fresh perspective and enthusiasm for tackling complex problems to your team.

My dedication to quality and scalable software development is demonstrated through my recent experiences. I participated in a highly competitive 6-month robotics competition, where I was responsible for the software development and task flow creation. This intensive experience honed my skills in breaking down complex problems, iterating on solutions, and prototyping effectively. As the software lead in a team of four, I coordinated tasks, resolved bottlenecks, and ensured our robot's performance was optimized for speed and reliability – crucial factors in the competition.

To further showcase my technical abilities, I developed a project GEN-AI project which solves the time-consuming process of watching reviews for mobiles on Youtube to choose best phones. I utilized LLM to process a large chunk of information feeding it all the reviews by different creators and websites to get a combined result within a min in easy-to-understand format. I utilized Django to develop the prototype and used Postgresql to save the reviews for common devices.

What separates me from other candidates is the ability to quickly adapt to different technologies, be it software or hardware and ability to work in a time-constrained environment that can be easily verified with my experiences.

These experiences have not only sharpened my technical skills but also reinforced my passion for creating efficient, business-centric software solutions. I am excited about the opportunity to bring this enthusiasm and fresh perspective to GS, contributing to the innovative projects and learning from the experienced team.

I would welcome the chance to discuss how my skills and passion align with organization's goals. Thank you for your time and consideration.

Best regards,

Ashish Rathore
